Skills

Javascript | Typescript | React | Next | Webpack | Vite | Vitest / Jest | React Testing Library | SASS | CSS-in-JS (styled-components) | Tailwind | SOLID principles | Git | REST | Node.js | Express | PostgreSQL | PrismaORM | MVC | TDD | CI/CD | Linux | HTML | CSS

About me

Full-stack Developer with 3 years of experience, primarily using TypeScript in creating applications with React.js and Node.js, along with frameworks such as Next.js, Express.js, and tools like Docker and Git. I have experience in building interfaces, creating and consuming REST APIs, and managing relational and non-relational databases.

I am highly adaptable and have built various transferable skills that allow me to participate in all stages of a product's development cycle. At Q4, I created investor relations solutions and websites for companies listed on the US stock exchange, such as J&J and PayPal; as a freelancer, I developed SEO-optimized and highly performant websites.

Experience

Q4 Inc.
Remote - Toronto / Canada
Frontend Developer II
September 2023 - May 2024

In 2023, I was Involved in maintaining internal tools (such as a Scraper written in Node + Puppeteer) and acted as a facilitator of processes between teams to increase the efficiency of everyday tasks.

- I have developed improvements in the website production process, including: standardizing components in Figma, enhancing communication on technical issues with clients, and optimizing the use of QA tools and resources to avoid false positives.
- I presented a proof of concept for a new Design System with integrated tokens. The solution would reduce the time required to develop a new project by up to 20%.
- I developed the website for the pharmaceutical company *Johnson & Johnson*. One of my biggest challenges, I managed expectations between its various

decision-makers. Specifically, I delivered a research pipeline page that could be updated by uploading an Excel spreadsheet, which was vital to their project.
- In total, I participated in the delivery of over 50 projects for different Q4 clients throughout my time at the company, all of which received positive feedback.
- I conducted onboarding processes for new team members, assisting with the adaptation to the workflow, sharing experiences, and highlighting key points for daily activities.

Frontend Developer I
September 2022 - September 2023

Q4 is a leading company in the global financial market. As a developer on the Activations team, I started as the person responsible for delivering investor websites as part of a larger suite of products offered by the company, using their proprietary CMS, JS, SASS, Mustache.js, jQuery and Highcharts.js.

- I delivered websites for over 12 clients in my first year and assisted in troubleshooting issues on projects for other colleagues.
- I was recognized for my quick adaptation and began progressing to projects with a higher level of customization and/or greater responsibilities involved (large companies, clients with multiple decision-makers, complex Figmas).
- Q4 project managers highlighted that my ability to translate demands into reality and discuss the best plans, with clear steps, suggestions, and accessible language, was a key factor in the successful outcome of each project.

Licenses and Certifications

Full-stack Web Development Bootcamp
Ironhack (2022)

A 9-week full-time bootcamp focused on the MERN stack: MongoDB, Express, React, and Node.

English Proficiency Exam
DLLE/UFSC (2022)
